PROFESSIONAL SUMMARY

Dynamic and results-oriented Manager Software Engineer with 4 years of progressive experience across global pharmaceutical enterprises — MSD (Merck Sharp & Dohme) and Cognizant Technologies (Takeda Pharma). Combines hands-on full-stack engineering expertise with technical leadership, having managed and mentored a team of 7 engineers to deliver production-grade enterprise applications. Proven ability to architect cloud-native solutions on AWS, migrate monolithic systems to microservices, and deliver automation frameworks that generated over \$200K in annual savings. Brings international project exposure working with Japanese and US-headquartered global firms, strong communication skills, and a track record of end-to-end ownership from design through deployment. Holds AWS Cloud Practitioner and Microsoft Azure AI certifications. Ready to contribute at high impact in Singapore or any international technology hub.

PROFESSIONAL EXPERIENCE

Manager Software Engineer · MSD – Merck Sharp & Dohme, Hyderabad, India Sep 19, 2025 – Present

Global pharmaceutical leader (Fortune 500). Leading full-stack engineering and team management for two strategic internal platforms.

► Project 1 — QuizHub (Employee Onboarding Platform)

- **Directed a team of 7 engineers** end-to-end — from requirement gathering, sprint planning and architecture design through UAT, deployment, and post-launch support — delivering the QuizHub platform on schedule.
- QuizHub is an **internal onboarding application** enabling new joiners across the organisation to learn about company policies, culture, and processes through an interactive quiz-based experience, significantly reducing manual onboarding overhead.
- Architected the full-stack solution using **ReactJS with Ant Design System** for a pixel-perfect, responsive UI; **Spring Boot** REST APIs for business logic; and **MySQL** as the relational datastore.
- Designed and implemented **Role-Based Access Control (RBAC)** with four distinct roles — **Admin, Creator, Reviewer, and User** — enforcing strict workflow governance so content moves through a review pipeline before publishing.
- Integrated **PingFederate SSO authentication** for seamless, secure enterprise single sign-on, aligning with MSD's global identity management standards.
- Deployed the entire application on **AWS**, configuring **AWS SES (Simple Email Service)** for automated transactional emails at key onboarding milestones (welcome, quiz completion, certification).
- Conducted regular **code reviews, design reviews, and 1:1 mentoring sessions** with team members, raising overall code quality and fostering a culture of engineering excellence.

► Project 2 — Backup Portal (Monolith-to-Microservices Migration)

- Leading backend engineering for the **modernisation of a legacy monolithic Spring Boot service** into a scalable, independently deployable microservices architecture.
- Designed a **3-tier pipeline pattern** — **Ingestor → Processor → API** — that aggregates and normalises data arriving from **10+ heterogeneous data sources**, each mapped to a dedicated microservice for isolation and maintainability.
- Built a **shared common module** containing all JPA entities and DTOs to ensure consistency and eliminate duplication across microservices.
- Developed the **API microservice** exposing clean RESTful endpoints that are consumed by the **Oracle APEX** frontend via REST services — cleanly decoupling UI from data processing logic.
- Deployed each microservice as an **independent AWS ECS Fargate service** and wired all services behind **AWS API Gateway**, providing centralised routing, rate-limiting, and access control.

- The frontend portal is built on **Oracle APEX**, interfacing with the Spring Boot backend over secured REST endpoints.

Java Full Stack Engineer · Cognizant Technology Solutions, Hyderabad, India Sep 2022 – Sep 17, 2025 (3 Years)

Global IT services firm (Fortune 200). Embedded within client Takeda Pharmaceutical (Japan's 3rd-largest pharma, Top-20 globally) as a core engineering resource.

► Project — Takeda myPKFiT (Pharmaceutical Digital Platform)

- **Saved \$200,000+ per year** for Takeda by architecting a comprehensive test automation framework covering 7+ web and mobile applications using **Selenium, Appium, Python, and BrowserStack**, eliminating manual regression cycles.
- **Ranked 6th out of 222 ideas** at a company-wide Cognizant innovation hackathon for the myPKFiT mobile automation framework design.
- **Led a GCP-to-AWS cloud migration** — transferred production data from Google Cloud Storage buckets to **AWS S3** using **AWS DataSync and Python SDK**, achieving zero-downtime cutover and measurable performance improvements.
- Developed **ReactJS frontend components** integrated with Spring Boot microservices, delivering a high-performance, accessible UI aligned with Takeda's enterprise design system.
- Provisioned and managed scalable **AWS infrastructure using Terraform (IaC)**, implementing auto-scaling groups to handle variable production traffic without manual intervention.
- Engineered **MySQL stored procedures with automated alerting** to detect data-loss scenarios in production, strengthening data integrity and meeting regulatory monitoring requirements.
- Built a fully automated **AWS S3 data ingestion pipeline** — integrating Python, MySQL, Shell Scripting, and AWS SDK — to process client data uploads seamlessly and reliably.
- Authored **Ansible playbooks** to automate application deployments across multiple environments and host groups, reducing deployment time and human error.
- Created and maintained **Logz.io dashboards and alert rules** (backed by Splunk, AppDynamics, Kibana) aligned to client SLA thresholds for proactive incident detection.
- Delivered **mobile automation coverage for 7 Mendix applications** using Appium, accelerating release velocity and reducing QA cycle time.
- Built reusable Python utility scripts for extraction process automation — reducing repetitive engineering effort and improving maintainability.
- Collaborated closely with globally distributed teams across **India, Japan, and the US** in Agile/Scrum sprints, participating in sprint planning, demos, and retrospectives via JIRA and ServiceNow.

INTERNSHIP EXPERIENCE

Full Stack Developer Intern · Cognizant Technology Solutions, Hyderabad, India

Apr 2022 – Oct 2022

Project: Audit Management System (Internal Project Tracking Platform)

- **Led a pod of 5 interns** as POD Leader — planned sprints, delegated tasks, and ensured on-time delivery across all team members.
- Built a microservices application (5 services) using **Spring Boot** (backend), **Angular** (frontend), and **MySQL** — deployed on **AWS EC2, ECS, ECR, S3, and CodePipeline**.
- Completed an intensive **6-month Java Full Stack training curriculum** before leading the independent project.

Frontend Developer Intern · Zemoso Technologies, Remote

Dec 2021 – Feb 2022

Project: Blinkist App Clone · Stack: React, JavaScript, HTML5, CSS3, Java, Spring Boot, MySQL, Git, AWS

- Developed a **React functional component-based library application** following **atomic design principles** (atoms, molecules, templates, pages).
- Integrated **React Storybook** for UI component documentation; implemented **GitHub workflows** for collaborative version control.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, Shell Scripting

Frontend: ReactJS, Redux Toolkit, Context API, Ant Design System, HTML5, CSS3, Bootstrap, Angular

Backend Frameworks: Spring Boot, Flask, REST API Design, Microservices Architecture

Cloud – AWS: EC2, S3, ECS (Fargate), EKS, IAM, RDS, VPC, DataSync, API Gateway, SES, Auto Scaling, CodePipeline, SDK

Infrastructure as Code: Terraform, Ansible

Containerisation: Docker, Kubernetes

Databases: MySQL, Oracle (Oracle APEX, PL/SQL Procedures)

DevOps / CI/CD: Jenkins, GitHub Actions, Git, SonarQube

Testing & Automation: Selenium, Appium, BrowserStack, PyTest, Mobile Automation (Mendix), Robotic Framework

Authentication / IAM: PingFederate SSO, AWS IAM, Role-Based Access Control (RBAC)

Monitoring & Logging: Logz.io, Splunk, AppDynamics, Kibana

Project Management: JIRA, ServiceNow, Agile/Scrum, Sprint Planning, Code Reviews

Operating Systems: Linux (Ubuntu/CentOS), Windows

CERTIFICATIONS & AWARDS

- **AWS Certified Cloud Practitioner** — Amazon Web Services (Active)
- **Microsoft Certified: Azure AI Fundamentals (AI-900)** — Microsoft (Active)
- **Blue Bolt Champion Award** — Cognizant, 2024 · Top performance recognition
- **Blue Bolt Best Idea Generator Certificate** — Cognizant, 2022
- **Innovation Hackathon — 6th Place (out of 222)** — myPKFiT Mobile Automation Framework

EDUCATION

Degree	Institution	Score	Year
B.Tech – Computer Science (CSE)	Vidya Jyothi Institute of Technology	8.54 CGPA	2022
Intermediate (MPC) – TSBIE	Narayana Junior College, Champapet	98%	2018
10th Grade – SSC	Silver Drops High School, Jillelaguda	90%	2016

ADDITIONAL INFORMATION

Languages: English (Professional – C1), Hindi (Fluent), Telugu (Native)

Nationality: Indian · **Work Authorisation:** Requires work visa sponsorship · **Availability:** Immediately available for relocation

Date of Birth: 26 November 2000 · **Location:** Hyderabad, India · Open to Singapore / Asia-Pacific / Europe / UAE
